

BERICHTE
FREIBURGER FORSTLICHE FORSCHUNG

HEFT 47

**International Conference
“The Question of Conversion of Coniferous Forests”**

**27 September – 02 October 2003,
Freiburg im Breisgau, Germany**

Abstracts

FORSTLICHE VERSUCHS- UND FORSCHUNGSANSTALT
BADEN-WÜRTTEMBERG

ISSN 1436-1566

Die Herausgeber:

Dr. Jörg Hansen,
Prof. Dr. Heinrich Spiecker
Albert-Ludwig-Universität, Freiburg Institut für Waldwachstum
Prof. Dr. Konstantin von Teuffel,
Forstliche Versuchs- und Forschungsanstalt Baden-Württemberg (FVA), Freiburg

Umschlaggestaltung:

Bernhard Kunkler Design, Freiburg

Druck:

Eigenverlag der FVA, Freiburg

Bestellung an:

Forstliche Versuchs- und Forschungsanstalt Baden-Württemberg
Wonnhaldestraße 4
79100 Freiburg
Telefon: 0761/4018-0, Fax: 0761/4018-333
e-Mail: fva-bw@forst.bwl.de

Gedruckt auf 100 % chlorfrei gebleichtem Papier

CONTENT

Preface	6
1 Silvicultural Strategies for Developing Old Growth Structures in Conifer Plantations with particular reference to Oceanic Climates.	8
2 The Serious task of Conversion - Changing Conifer Plantations to Natural Stands	9
3 Conversion of loblolly pine back to native longleaf in the southern USA	11
4 Successful Conversion Strategies in the Boreal Forests of Northern Europe: Retention, Admixtures, and Overstories in Young Stands	12
5 Impact of species composition on forest soil properties and nutrient fluxes of secondary pure spruce and mixed spruce-beech stands	13
6 Conversion of pure, even-aged Norway spruce plantations to mixed forests on former Atlantic heathland in Denmark	15
7 The development of arthropods during and after conversion of pure spruce stands into mixed forests	16
8 Aspects of Conversion out of the view of private Forest Enterprises - a modelling, economic and political approach	17
9 The effects of forest conversion on ground vegetation in the Southern Black Forest	19
10 The Sustainability Coefficient (SC) - A tool to control Sustainability	20
11 Conversion of ageing Scots pine (<i>Pinus sylvestris</i> L.) forests in Western Europe based on natural vegetation dynamics	21
12 Moesian beech (<i>Fagus moesiaca</i> Domin, Maly/Czeczott), a Significant genetic resource for the Conversion of coniferous Forests in Serbia	23
13 Conversion of Lowland Forests in Poland	24
14 Sap flow dynamics in terms of competition between overstorey spruce and understorey beech in southern Moravia	25
15 Age of spruce needles as an indicator of vitality in conversion of spruce stands in Poland	26
16 Nematoda response to forest conversion	27

17	Root growth and mycorrhizal diversity in monocultural and mixed Scots pine and beech ecosystems of the German Northeastern Lowlands	28
18	Influence of conversion of pine forests on soil mites fauna (Acari, Mesostigmata)	29
19	It's not just semantics: Why clear communication matters	30
20	The methodical aspects of researching the model for managed Forests	31
21	Dynamic tendencies of conifers and hardwoods in natural and managed forests of the East-Central Europe	32
22	DSD - a computer based decision support tool for the evaluation of silvicultural treatment alternatives for secondary Scots pine (<i>Pinus sylvestris</i>) forests	33
23	Impact of selective cutting and clear cutting on seepage water quality	35
24	What will be the future of China's forest plantations?	36
25	Conversion of coniferous forests in a social perspective	38
26	Operational factors influencing the efficiency in conversion	39
27	Ecological Consequences of Conversion	40
28	History of secondary spruce forests in Europe	42
29	Present distribution of secondary Norway spruce in Europe	44
30	Silvicultural strategies for conversion	45
31	Economic evaluation of conversion projects	47
32	Terms and Definitions Relevant for Conversion	49
33	Conclusions - Lessons learnt	50
34	Impacts of management strategies on nutrient fluxes in a temperate <i>Picea abies</i> (L. Karst) plantation	52
35	The Influence of Stand Structure on Crown Geometry in Sitka Spruce	53
36	Restoration of spruce resource in North-Eastern France after the Lothar storm	54
37	Restoration of deciduous forest in Söderåsen National Park, Sweden, as a LIFE-Nature project.	56
38	Multi-species stand classification. An analysis.	58

39	Conversion of a Norway spruce forest: impact on seepage water quality, soil fauna, and trace gas emissions.	59
40	Conservation of conifer tree species in Serbia	60
41	Changes in Soil Properties as affected by the Transformation of Spruce Monocultures to mixed Stand	61
42	Forest layout changes during a transformation of spruce monocultures. A Case Study of Hetlín.	63
43	Condition of coniferous plantations in Serbia -meeting objectives and management problems-	65
44	Forest Conversion - Stages of Planning and Regulations of Wood Production	66
45	A new project: A guideline for broadleaf forests under shelterwoods of spruce	67
46	Target Reproduction of Pine Forests	68
47	Line planting as one of way for conversion of inappropriate coniferous forests	69
48	Importance of Fast Growing Coniferous Forests in Turkey	70
49	Analyzing silvicultural options for Norway Spruce (<i>Picea abies</i>) stands using Simulated Annealing	71
50	Shelterwood method of felling as an indispensable condition of preservation of native forest types of Northern Bukovina	72
51	Objectives and Methods of transforming spruce monocultures: evaluation of exemplary areas of Near-Natural forest management in the Czech Republic	73
